ATTACHMENT L

PRACTICE ON THE DIAGNOSTIC PROCESS

On each clinical, students keep recorded on a chart information on 2 patients related to diagnoses for PT. They should select 1 patient for which the decisions were clear-cut and 1 that was more challenging or difficult to classify. This will be due by the 6th week of the affiliation. The clinical education advisor reserves the right to ask a student to redo the assignment, if indicated.

The chart could look something like this:

Patient's Medical Diagnosis	Key Tests to determine the DX for P.T.	Associated Signs & Symptoms	Diagnosis for P.T.	Differential Diagnosis	Treatment Given
